

# Efforts by Domestic & Overseas Affiliated Companies

The Third Environmental Action Plan includes the goal that both domestic and overseas affiliated companies in the TG group work together to further reinforce initiatives for environmental conservation. This section introduces companies in Japan and abroad which are active on environmental issues.

## ■Activities of Togo Jushi Co., Ltd.

Togo Jushi Co., Ltd., which acquired ISO 14001 certification in June 2002, is located in Togo-cho, Aichi-gun, Aichi Prefecture, which is famous as the venue of the Chunichi Crowns Golf Tournament, and mainly manufactures interior and exterior resin parts for automobiles. Togo-cho attaches importance to environmental administration. The municipal office itself acquired ISO 14001 certification and is keen to conserve greenery, ponds, and the countryside. The company actively participates in various events to deepen communication with people in the region.

It emphasizes the effective use of resources to reduce environmental burden through reduced defective processes, internal processing of recycled materials, expanded material recycling by thorough material separation, and thermal recycling. The results have come in the form of practically zero landfill waste and little incinerated waste, which has led to the total abolishment of internal incineration. Adoption of alternatives for organic solvents in a painting process reduced use of PRTR substances.

The company considers it most important to maintain and improve every employee's awareness of the need to participate in environmental conservation. In this sense, notices and information delivered to the company's employees and its suppliers include description in both Japanese and English.

Togo Jushi will steadily practice environmental conservation activities by valuing communication with its employees and local residents.

## ■WATERVILLE TG INC.—ENVIRONMENTAL IMPROVEMENT

Waterville TG INC (WTG, ISO 14001 certification in June 2001), which is located in the heart of the natural beauty of Quebec, Canada, manufactures body sealing products for automobiles. By setting strict, voluntary targets for managing and reducing hazardous materials, as well as for energy consumption, WTG has achieved concrete results of a 30 % reduction in landfill waste as of the end of FY 2004 compared with FY 2001.

WTG is actively involved in social contributions regarding environmental preservation. It financially supports efforts to restore the Coaticook riverbank near the main building and actively participates in the workshops of a non-profit organization and regional center, which promote sustainable development.

The WTG vice president in charge of engineering received an annual regional recognition award and was selected as an honorary president in 2003. In addition to all internal environmental programs, WTG was requested to become member of "Eastern townships Green committee". Buildings & Environment Mgr is the representative of WTG Inc. on this regional committee. The company's environmental programs implemented within the production facilities are shown to the authorities of all regions every year, so that they can understand how WTG is committed to preserving the environment.
