

Reduction of Packaging in the Distribution Stage

Collection/recycling

By washing returnable boxes* more frequently and keeping them clean, we are reducing the amount of packaging materials used to prevent products from being soiled. We are also reducing packaging materials by putting lids on

returnable boxes and making other changes while maintaining a balance between ensuring product quality and reducing the amount of packaging materials used.

* Boxes for transporting products

Reducing Water Risks

Manufacturing

Establishment of 2030 Milestones

In terms of water necessary for business activities, we comply with the laws and regulations established by each country. Also, we are assessing risks in both water usage and water quality in Japan and international locations, and making improvements at high-risk

locations. Even at low-risk sites, we are working to reduce water intake amounts by implementing measures such as utilizing rainwater. We are also working to systematically upgrade our wastewater treatment facilities to produce even cleaner wastewater.

Milestones for Minimizing Water Risk: Global

Item		2025	2030	2050 (FY)
High-risk areas	Water quality (4 sites)	Measures implemented at 2 sites	Measures implemented at 4 sites (all sites)	Minimization of water risk
	Water intake amount (7 sites)	Measures implemented at 3 sites	Measures implemented at 7 sites (all sites)	
Low-risk areas		Compared to FY2019: Water intake per sales unit: 6% reduction	Compared to FY2019: Water intake per sales unit: 11% reduction	

Building Environmentally-friendly Societies

Basic Philosophy

Based on the concept of Nature Positive, we have set coexistence with local communities as one of the materialities (key issues) to conserve biodiversity, and

are working on woodlands creation, building of biotopes, and conservation initiatives for tidal flats.

Risks and Opportunities Related to Biodiversity

We conduct initiatives by identifying risks and opportunities related to biodiversity. Going forward, we aim to enhance our contributions to

global environmental conservation while conducting disclosures based on the framework of the Taskforce on Nature-related Financial Disclosures (TNFD).

Issue	Risks	Opportunities	Measures
Reduction of natural capital	- Reduced earnings and production hindered by difficulty in procurement of raw materials and price hikes - Drop in product quality due to deterioration in water quality - Decline in public trust in the Company due to damage to surrounding areas caused by the discharge of contaminated wastewater	- Business continuity by securing human resources and raw materials through nature conservation initiatives - Sustainable production and enhancement of corporate value by securing good quality water resources through woodlands creation and river conservation	- Development of more lightweight products - Development of recycling technology for raw materials - Expanding the use of plant-derived biomaterials and recycled materials - Enhancing wastewater management and related controls

Establishment of Medium- to Long-Term Targets

We have set a “No Net Loss of Greenery” goal of restoring 59 hectares of greenery by 2050, which is equivalent to the area of our plants, and are conducting initiatives to achieve this goal. Specifically, under the slogan “Connecting Activities with Water, the Source of Life,” we

are conducting initiatives in the areas of mountains, rivers, and oceans. Among these efforts, the biotope* maintained on the Company premises has been recognized as a biodiversity conservation area, designated as a “Nature Coexistence Site” by the Ministry of the Environment.

Scenario for Attaining Targets
